90 R

Brake fluid - DOT 5.1

USES

This fluid is particularly designated to the **disk and drum brake systems** and generally adapted to any type of hydraulic clutch systems.

It can be used in every system when an SAE J1703, DOT 3, DOT 4 or DOT 5.1 is required.

(Remark: Not for use when a Mineral Hydraulic Liquid is recommended.)

MAIN CHARACTERISTICS

		Units	
Density	20°C	kg/m ³	1062
Kinematic viscosity	40°C	mm ² /s	7.10
Kinematic viscosity	100°C	mm ² /s	2.3
Freezing point		°C	- 72
Boiling point (dry)		°C	265
Boiling point (wet)		°C	185

The data given in this table are typical values from production and cannot be specifications in any case.

PROPERTIES & ADVANTAGES

- Synthetic product based on non silicon molecules, in conformity with SAE J1703 & DOT 5.1 specifications
- Excellent boiling point stability allowing a longer use, even into severe conditions
- No seal aggressiveness
- High anticorrosion power facing the most severe requirements
- **Total miscibility** with SAE J1703, DOT 3 and DOT 4 fluids

PERFORMANCES

FMVSS 116-DOT 5.1

ISO 4925

SAE J 1703
