YACCOLINE

PATE ALU

Anti-seizing aluminum paste

USES

Lubricating and greasing aluminium paste suitable for application in **severe hot conditions** (efficient at very high temperature exceeding 500°C).

Allows easy removal of metal parts assembly exposed to extreme temperatures.

MAIN CHARACTERISTICS

	Typical Values
Aspect Colour	Aluminium Grey

The data given in this table are typical values from production and cannot be specifications in any case.

PROPERTIES & ADVANTAGES

- Avoids the rust formed by thermal, atmospheric or chemical phenomenon
- Replaces anti-gripping copper-based products when these latter may create a non-controlled chemical reaction.
- Perfectly suitable for outdoor equipment exposed to corrosive atmospheres (seaside, industry...)
- Very good resistance to water

DIRECTIONS

1. Shake well before use
2. Spray evenly about 20 cm from the parts to be treated
3. **Drain the aerosol head down after use**

Before use, read carefully the safety label on the packaging and/or check the Health and Safety Sheet available on yacco.com.
