

PATE CUIVRE

Copper assembly paste

USES

YACCO PATE CUIVRE contains fine copper particles in a grease-based lubricating agent.

Enables easy dismantling and provides permanent protection against rust and corrosion, even when parts are exposed to poor weather conditions, heat or chemical agents.

Particularly recommended for highly stressed mechanical parts (humidity, temperature, heavy loads, etc.).

Suitable for a wide range of uses: cars, industrial equipment, marine equipment, etc.

PROPERTIES & ADVANTAGES

- ▶ Excellent protection under high temperature conditions: cylinder-head gaskets, exhaust manifolds.
- ▶ Outstanding protection against corrosion: bolts, cables, chains and all outdoor equipment exposed to corrosive environments (industrial and marine).
- ▶ Designed to prevent metal-to-metal contact during assembly and dismantling, even under heavy loads.
- ▶ Covered parts are protected from corrosion and damage during dismantling, meaning they can be reused.
- ▶ Very good electrical conductivity.

INSTRUCTIONS FOR USE

Apply a thin coat on all parts before assembling.

Temperature range is **-20°C to +1000°C**, maximum 1100°C.
